Problem:

In this rapid technological growing society, People have ideas but they do not have handsome amount for investment and They don't know where to find money for their businesses to run. They receive so many issues when raising awareness for funds so they can start their business. They sometimes not meet the right investor for their investment and they don't know how to achieve that investment digitally.

Overview:

The platform's goal is to create a space where entrepreneurs can present their business ideas and connect with potential investors. Similar to Upwork and Fiverr, this platform facilitates communication and partnership between users with distinct roles, such as entrepreneurs seeking funding and investors seeking opportunities.

Objectives:

To create a platform that enables entrepreneurs to showcase their business ideas and connect with potential investors, facilitating effective communication and partnerships between users with distinct roles.

Target Audience:

- People who don't have required investment for their ideas to be in businesses.
- People who don't have resources to outsource their ideas.
- People who have a fair experience in Entrepreneurship but don't know whom to approach.
- People who want right investor for their ideas to build into business.

Minimum Viable Product (MVP) Requirements:

1. Role Based Access Control (RBAC) Authentication.
2. User Separate Dashboards (Entrepreneur and Investor).
3. Business Proposals / Ideas listings.
4. Business Proposal / Idea Detail Interface.
5. Search and Filter Business Proposals / Ideas.
6. Chat Box Integration for Seamless Communication.
7. Contact / About Interfaces.
8. Payment Integration for Investment Funds Transfer.

Technology Stack:

- MERN STACK (React, Nodejs, ExpressJs, MongoDB).
- Tailwind CSS for Customization of CSS.
- Authorized / Authentic Third Party NPM Packages.
